

The world wide leader of Link 16 solutions for air, ground, and maritime applications

Overview

Data Link Solutions, a joint venture between BAE Systems and Rockwell Collins, has more than 20 years of experience providing affordable, high performance, high reliability data link terminals for coalition forces. Our extensive installed base and 24/7 global support network make DLS the right choice for your data link requirements.

MOS Mod

The MIDS On Ship Modernized (MOS Mod) system receives and transmits text and imagery to military air, ground, and maritime forces to generate mission scenarios in real time. As a smaller, lighter version of the MIDS On Ship, it is interoperable with all Link 16 systems and enhances capability with 1,000 watts of radio-frequency output power.

MIDS JTRS

The Multifunctional Information Distribution System Joint Tactical Radio System (MIDS JTRS) is a 4-channel radio designed to run the complex Link 16 waveform and up to three additional communication protocols. It enables the network-centric communications capability of tomorrow's radio today — all in one unit. This is the first software defined radio providing Concurrent Multi-Netting; Concurrent Contention Receive (CMN-4) capability, replacing numerous legacy radios and reducing the need for excessive spares and logistics support.

TTR

The TacNet™ Tactical Radio (TTR) is the smallest, lightest, and lowest cost Link 16 terminal on the market today. The TTR does not require cooling, does not produce noise, and was designed for ease of integration. It has three power modes to meet various mission requirements and offers superior anti-jam performance to meet the warfighter's needs. The TTR has been selected for and integrated on various C-130s, helicopters, and transportable gateways including the Rockwell Collins NTG offering.

Enabling the tactical network
